Q-7) Case Study:

A mechanised factory makes tomato ketchup using machines. First, fresh tomatoes are collected from farms and brought to the factory in trucks. The tomatoes are washed and cleaned to remove dirt and germs. After cleaning, the tomatoes are crushed and cooked to make thick ketchup. Spices and salt are added to improve the taste. The ketchup is then filled into bottles by machines. Workers check the bottles for quality and safety. The bottles are packed in boxes. Finally, the packed ketchup bottles are sent to shops for sale.

Choose the Correct Option :

1. Where are tomatoes collected from first?
a) Market   b) Farm   c) Factory

2. What is done to tomatoes before processing?
a) Cooking   b) Washing   c) Packing

3. Which step turns tomatoes into ketchup?
a) Packaging   b) Processing   c) Distribution

4. Why is quality checking done?
a) To decorate bottles   b) To ensure ketchup is good   c) To increase price

5. What is the last step in the factory?
a) Washing   b) Bottling   c) Distribution
